

SeneALGAE 

SeneOX[®]

Natural Rosemary Extract

ImmunoGEN⁺

BENTO⁺

OptiMINERAL

- flavored with insect flour
- low calorie for perfect shape
- year-round consumption

COMPOSITION

Analysis (%)	Size	
	3,0 mm	6,0 mm
Protein	29,00	29,00
Fat	4,20	4,20
Fibre	3,10	3,10

SPECIFICATION:

Our General is a perfect, floating feed for koi. Ingredients make digesting easy and efficient in absorbing vitamins and minerals. Balanced composition of needed nutrients keeps your koi in ideal shape. Thanks to the ability to float, you can observe whole process of feeding. It lowers risk of water pollution to the minimum.

Feeding tips:

No more than 4 times a day. It depends on size of a fish and environmental temperature. After 5 minutes remove residues to not overfeed koi. Don't feed koi in temperature below 10°C, because their appetite and metabolism are reduced.

At the customer's special request, for an appropriate surcharge, it is possible to change the dye that does not color the water.

The nutritional value and composition are adequate for the time of writing. We retain the right to modify our recipe. Therefore we make reference to the label.

Fettle

SeneOX[®]

Natural Rosemary Extract

SeneVIT C⁺

Immuno**GEN⁺**

BENTO⁺

OptiMINERAL

OptiMOS⁺

- improves health and vitality
- contains inulin, prebiotics, powdered garlic and organic acids
- flavoured with insect flour
- rich in Omega 3 - 6 fatty acids

COMPOSITION

Analysis (%)	Size	
	3,0 mm	6,0 mm
Protein	23,00	23,00
Fat	4,40	4,40
Fibre	3,50	3,50
Ash	4,60	4,60

SPECIFICATION:

Fettle is created to support health throughout feeding process in easy way to control. Inulin and prebiotics have a digestive aid because it supports work of microflora located in digestive system. The biggest benefit of Fettle is immune-system improving impact. It works perfectly under stressful, adverse condition and facilitate survival of koi. It can be used after intense carotenoids feeding stage because it helps to reach proper coloration.

Feeding tips:

No more than 4 times a day. It depends on size of a fish and environmental temperature. After 5 minutes remove residues to not overfeed koi. Don't feed koi in temperature below 10°C, because their appetite and metabolism are reduced.

At the customer's special request, for an appropriate surcharge, it is possible to change the dye that does not color the water.
